7. STIPULATIONS

Customers are obliged to make available all information as well as technical files and types that are required for the procedure described in section 1.

The certification body will issue the corresponding type-examination certificate conditional on full compliance with the requirements of the procedure selected and the process flow in section 10.

This certificate is valid for the product or product category bearing the trademark and type shown on the front page. In order to guarantee its compliance with the essential health and safety requirements of the directive or regulation stated on the front page, each product or product category must be marked in accordance with the requirements of the directive or regulation stated on the front page and its amendments.

Under the trademark and type designation stated on the front page, the manufacturer or supplier undertakes to deliver only products which, in all aspects that may influence their safety, satisfy the prerequisites for this certificate exactly. This certificate automatically becomes invalid if this condition is not fulfilled.

When assessing the product or product category stated on the front page, it has been assumed that its design and manufacture correspond to the recognized state of the art.

With regard to the operating and servicing instructions supplied with the product, we refer to the requirements of the directive or regulation stated on the front page.

If organizational measures are required to guarantee safety, they must be made known to the buyer and the user and included in the operating and servicing instructions.

The manufacturer is obliged to report to the certification body any complaints regarding the product or product category described on the front page as well as the remedying of faults without delay.

With regard to the area of application, placing on the market and putting into service, free passage of goods, conformity assessment procedures and CE marking, the conditions of the directive or regulation stated on the front page must be complied with.

Reference to this certificate in quotations, brochures, advertisements or other publicity media may only be made if accompanied by its number.

Upon request, the term of validity of the certificate is extended if the product or product category with the relevant conditions of use continues to fulfil the applicable health and safety protection requirements.

However, if new experience or findings indicate that adequate safety cannot be guaranteed or if the product or product category no longer corresponds to the latest state of the art, the certificate can be cancelled by Suva's certification body at any time.

Certificates that are no longer valid may not be used in any manner or way that suggests that they are valid.

Uncertified products may not be used in any manner or way that suggests that they are certified.

8. RIGHT OF APPEAL

The applicant has the right of appeal. Place of jurisdiction for all disputes arising from or about this application is Lucerne, Switzerland.

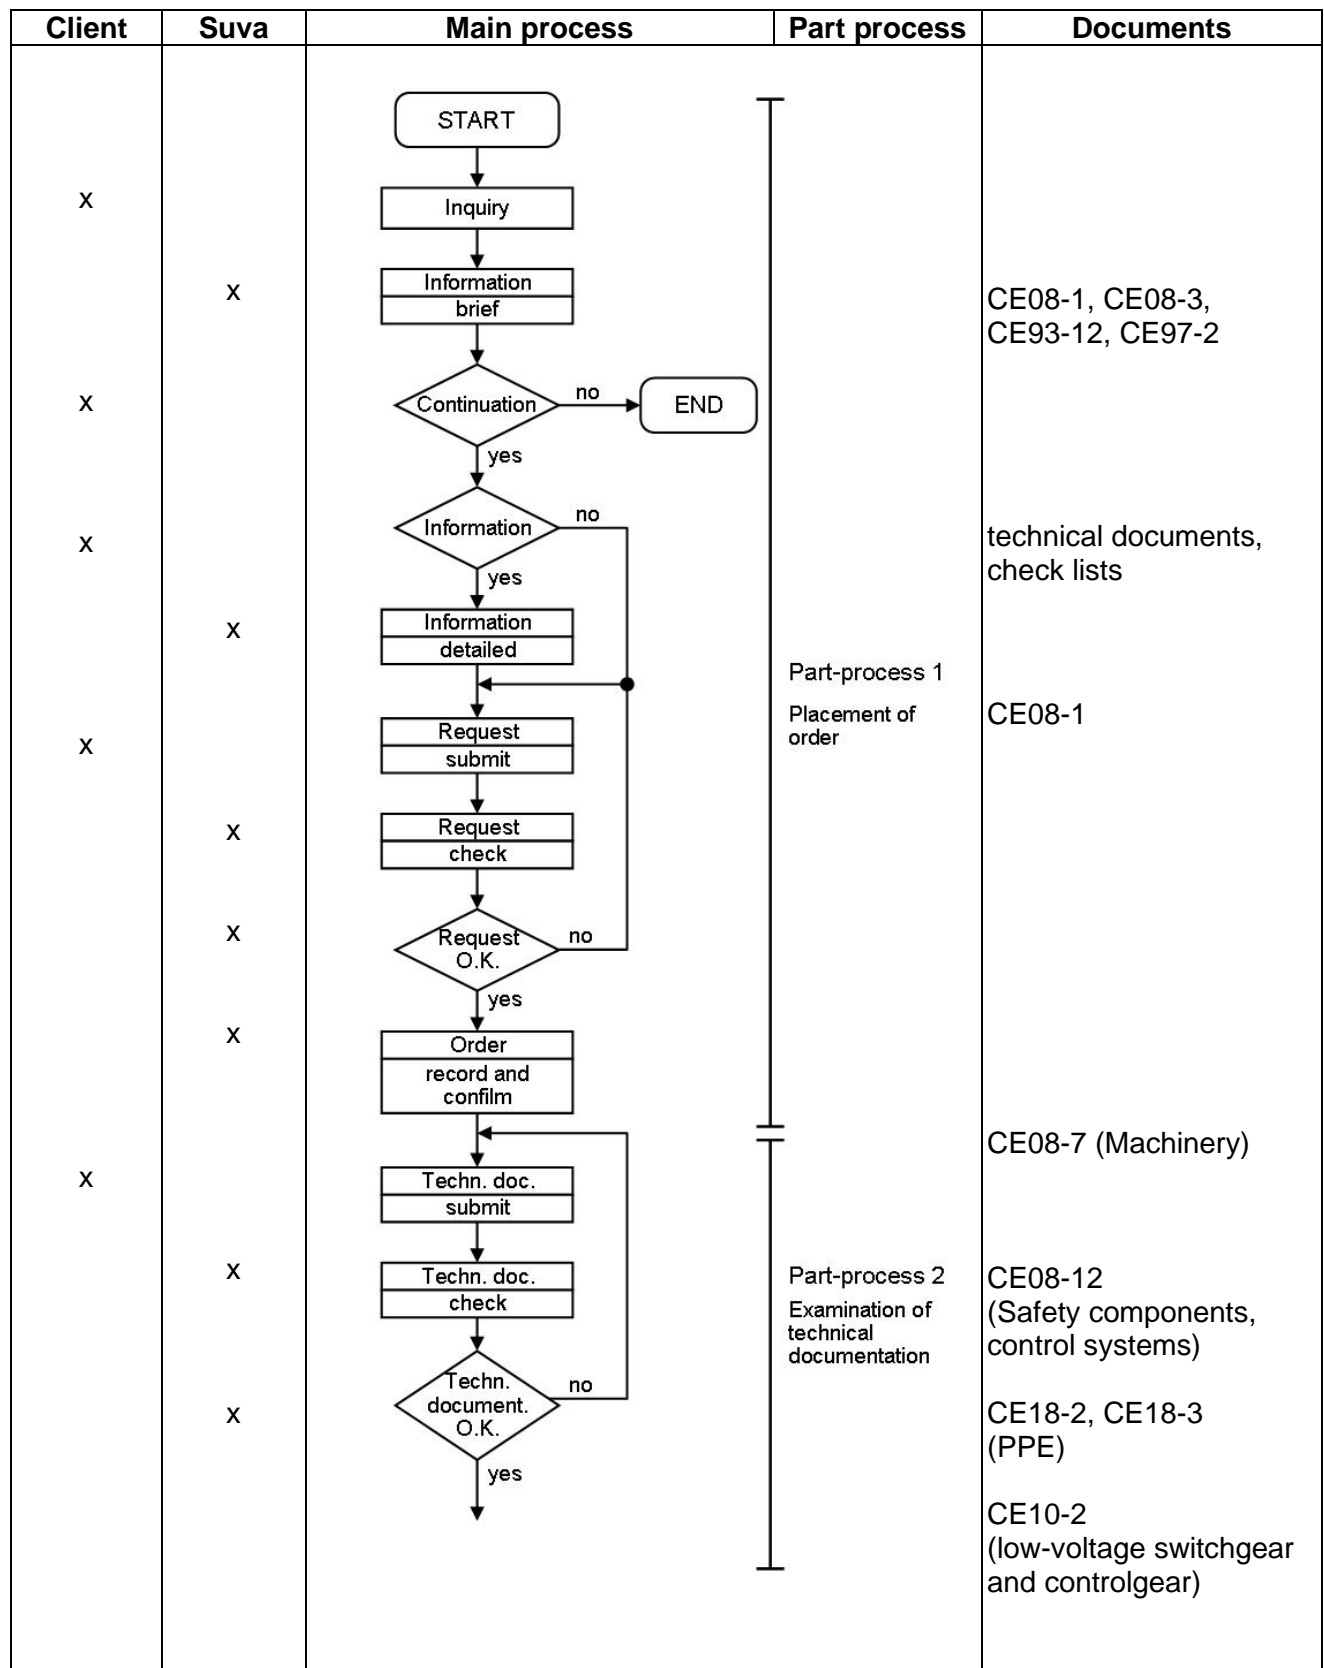

9. CONFIRMATION

With the application of his/her signature, the undersigned hereby confirms the accuracy of the information given above and accepts the fee schedule of the certification schedule.

For the type-examination of machines according to Machinery Directive 2006/42/EC Annex IV and personal protective equipment against falls from a height according to Regulation (EU) 2016/425/EU Annex V as well as to the procedure for conformity of PPE to type according to Regulation (EU) 2016/425/EU Annex VII, the applicant confirms with his signature that the application has not been submitted to any other notified body.
